# STUDY A SNAG

Snags are dead trees that are still standing. They are important places for wildlife. Can you spot a snag? Then can you find signs of animals giving it new life?

## Keep a Record!

## Helpful Things to Take Along

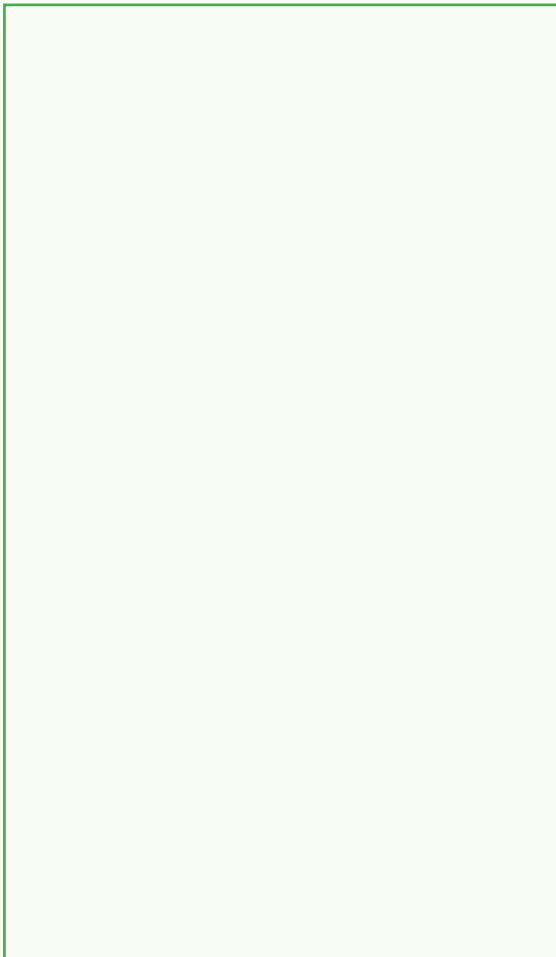

Date \_\_\_\_\_ Time \_\_\_\_\_

Location \_\_\_\_\_

Weather \_\_\_\_\_

- Magnifying glass
- Binoculars

Sketch your snag in the box below. Then look for signs of wildlife.

- From far away, binoculars may help you see birds perched atop the snag or peeking out of holes.
- Close up, use a magnifying glass to search for insects under the bark.

### Describe what you find:
